Mark Vishnevsky

FRONTEND DEVELOPER

PRIMARY STACK

JavaScript | TypeScript | React | React Native | Next.js | GraphQL | REST | Redux | Zustand | FSD(Feature-Sliced Design, Architectural methodology) | HTML | CSS modules | Scss/Less | Webpack | ESLint | Jest | Storybook | Gitlab

EXPERIENCE(4+ years total):

Frontend developer, ISCO

october 2021 – present

- I developed web and mobile applications from scratch, and maintained old projects.
- I optimized the performance of projects (decreased FCP/LCP, bundle size analysis and reduction, chunk splitting, memoization, server request optimization, elimination of unnecessary renders etc.).
- I conducted refactoring of existing projects to improve flexibility, scalability, and maintainability(migration from JS to TS, implementation of FSD architecture, setting up linters, component decomposition based on DRY, SOLID principles, implementation of CSS modules, etc.).
- I adaptively implemented layouts from Figma using CSS modules, Less, Sass, MUI, Antd, Framer motion.
- I conducted technical interviews for frontend developer positions, and mentored junior colleagues.
- I communicated with clients to form technical specifications for the development team. I wrote technical specifications for backend developers.

Web developer, Orgenergostroy (JSC OES)

May2019 – September2021

- I Created and maintained a web app for managing an eco-management system across various company branches from concept to production.
- Built the team from scratch by hiring 1 front-end developer and 1 back-end developer.
- Started writing the backend for the eco-management system using Node.js + MongoDB.
- I Documented and handed over the codebase to new developers.

Frontend developer, team lead – BBBS

March 2019 – July 2019

- I was responsible for developing a client side of platform for a Nonprofit organization aimed at socializing children from orphanages.
- As a team lead, I Managed a team of 3 frontend developers. Distributed micro-tasks across sprints, established communication with the client, backend team, testers, and designer.
- As a developer, I developed (React, BEM, CSS, HTML) a small portion of the platform (authentication, a section where mentors and children could track upcoming and past events in their city).
